

Cable End Seal

An innovative, multi-function component for efficient offshore cable installation.

Modular Cable Joint Technology for single-tube and multi-tube, composite core cables (umbilicals).

As Pull-in or Lay-down End Seal, direct access to the cable contents (electric, optical fibre, mechanical tubing, etc.) allows for efficient quality inspection-acceptance procedures.

The integration of connectors is optional.

The scaleable design allows attachment of most cable types.

The integration of cable bend-limiting protection is optional.

Following inspection testing, and removal via cable cut-back, the unit can be refurbished and re-used.

As Looped-back Signal End Seal, this feature allows for continuous transmission equipment verification and supports the customer's plan of future system expansion.

Ideal for use in conjunction with a passive branching unit.
