

Cable Joint

An innovative, configurable component for offshore cable systems.

Modular Cable Joint Technology for multi-tube, composite core cables (umbilicals).

The scalable design allows adaptation to most cable types.

Strategic, cost-effective project-oriented features;

- ✓ Designed for adaptability (technology platform)
- ✓ Designed for procurement (short-time delivery)
- ✓ Designed for field-integration (responsive cycle-time)
- ✓ Function as Transition Joint (cable-type combinations)

A corrosion resistant pressure housing with a proprietary cable feed-through seal, cable armor termination and cable bend-limiter provides submersible protection for connections of multi-tube, composite cable (umbilical) elements including power core, coaxial, optical fibre, and mechanical tube/hose.
